

Release Notes

ConstructConnect Document Viewer/Web Takeoff

Version 2020.7.0 April 09, 2019

Introduction

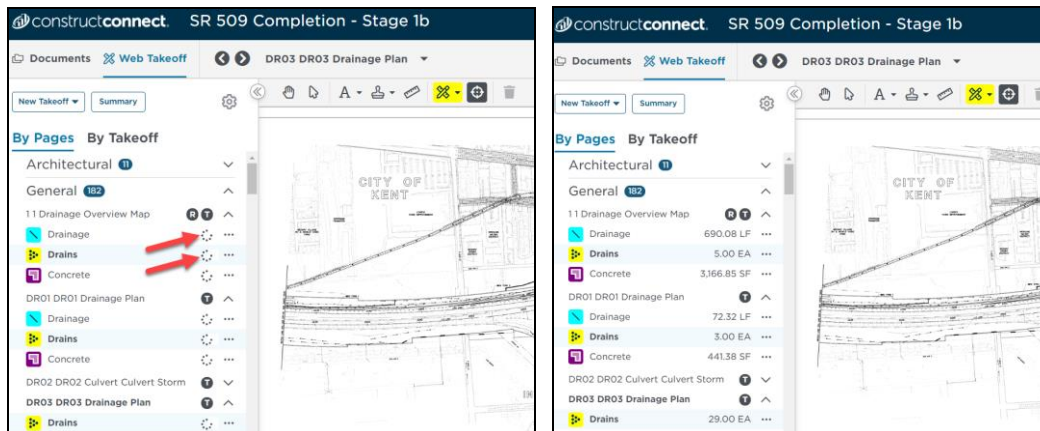

This document describes the features included in version 2020.7.0 release April 9, 2020.

Web features

This section describes the web features in this release.

Reload quantities when users make global changes

When users expand more than one page containing Takeoff and make a global change inside Web Takeoff (such as editing a Takeoff property or changing the Scale for all pages), the calculations on the expanded pages will be so that the most accurate quantities are always presented.

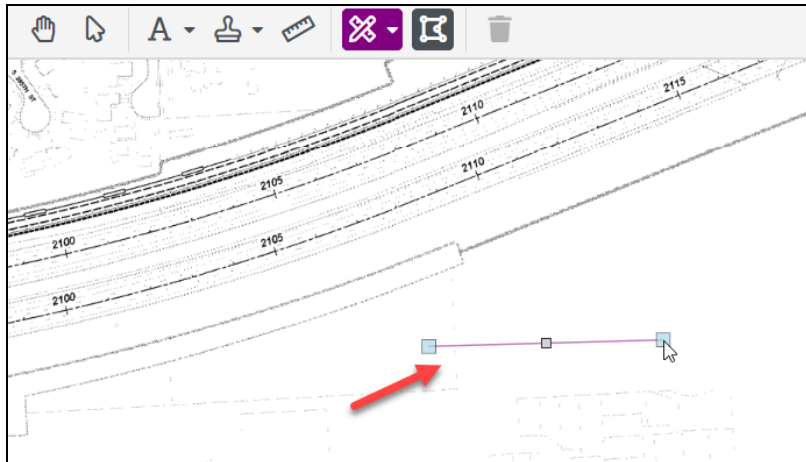

Click two points to draw linear takeoff

Users will be able to click on two points on the canvas to draw a linear takeoff object in addition to the click and drag functionality that is already available.

Display a line when a user starts drawing an area takeoff

Users will see a visual indicator when they start drawing so they can visually see the drawing of the area takeoff object.

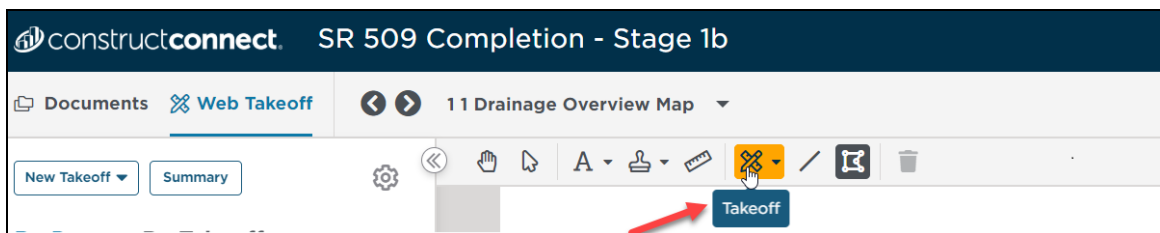

Set Continuous Linear as the default tool for a linear takeoff item

The Continuous Linear tool will be the default for new Linear takeoff items.

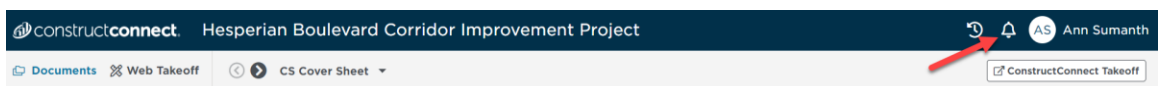

Improved hover over experience inside Document Viewer

Users will be provided with hover overs and additional information when needed without being intrusive.

Notifications

Shared notifications between CCPI and Document viewer will allow users to view notifications inside Document Viewer and be able to access them from anywhere..

Workflow Improvements and Bug Fixes

- Resolve Mixpanel implementation inaccuracies
- Fix zooming issues inside Document Viewer
- Various bug fixes.
